TABB Booth Invites Engineers to Beat the Balancing Challenge!

Attendees to the 2005 AHR Expo Should Head to the TABB Display at Booth #1736 for a Chance to Win a Free Lunch

Orlando, FL – The Testing, Adjusting and Balancing Bureau (TABB) will offer engineers the chance to prove their mettle at the AHR Expo at the Orange County Convention Center in Orlando, Florida (February 7-9, 2005). The AHR Expo is the primary showcase for leading manufacturers and entrepreneurial companies to display the latest HVAC&R systems, equipment, components, related products and services.

In order to prove TABB certified professionals are the best in the business when it comes to making HVAC systems hum, this year's TABB booth will have a complete duct system installed for demonstrations. Engineers are invited to come take the balancing challenge. If an engineer can perform the task that TABB certified technicians perform every day, TABB will buy his or her lunch at the convention.

According to John Hamilton, Chief Operating Officer for TABB, "We know what it means to be TABB certified. The hope is—if there are any doubters left out there in our industry—that this demonstration will impress upon them the importance of using highly-skilled and trained, TABB certified professionals."

The innovative installation at the TABB booth will consist of a functioning duct system with three clear plastic tubes so attendees can see how much air is flowing in each branch by a metering service.

In addition to the chance to win a free lunch, all who attend the exhibit will receive a free TABB air duct calculator. Engineers who show the proper credentials will automatically receive a TABB HVAC Procedural Guide, a \$70.00 value.

So stop the TABB booth, #1736—even if you can't pass the challenge, you'll still get something for playing.

###

The Testing, Adjusting and Balancing Bureau was developed by the National Energy Management Institute Committee (NEMIC), a not-for-profit corporation sponsored by the Sheet Metal Workers' International Association (SMWIA) and the Sheet Metal and Air Conditioning Contractors' National Association (SMACNA). TABB administers certification programs in testing, adjusting and balancing, sound and vibration, and system commissioning. TABB is the HVAC Industry's only certification program that requires strict adherence to a rigorous Code of Conduct and Customer Satisfaction Procedures.
