

TABB SUPERVISOR CLASS

EXPAND YOUR SKILLS AND KNOWLEDGE

This class focuses on the skills and knowledge needed to be a TABB Testing, Adjusting and Balancing Certified Supervisor. The TABB Certified Supervisor's project goal should be that contract obligations, as set forth in the drawings and specifications, would be fulfilled to the highest level of quality. A TABB Certified Supervisor should work directly with the testing, adjusting and balancing technicians on a project. The TABB Certified Supervisor ensures the use of balance procedures that impose minimum restrictions on HVAC systems.

ARE YOU READY TO BECOME A CERTIFIED PROFESSIONAL?

TESTING, ADJUSTING AND BALANCING BUREAU
THE PROFESSIONAL'S CHOICE™

First and foremost, it makes your client happy. Studies have proven that the general public just feels more comfortable turning over the controls of their building to people who have gone the extra mile to receive extra training to become certified. Certification isn't easy. It isn't just a piece of paper. Certification is something to work towards, that carries with it many rewards. Being a "Certified Professional" opens doors. And remember, TABB is the first certification program to synchronize all components of the complex HVAC industry and is recognized as a first-rate testing, adjusting and balancing program that assures building owners and managers their HVAC systems meet the design specifications.

SUPERVISOR CLASS & EXAM

A TABB Certified Supervisor is expected to be knowledgeable and capable in the Core Proficiency Requirements outlined in TABB's Certification Manual.
