

Is That a Sound or a Noise?

Certified Sound and Vibration Professionals Know the Difference

HVAC Sound and Vibration Certification Program

Ideally, HVAC systems should run smoothly and with minimal noise. However, some “kick in” with vibrations and loud rolling clatter. The sound and vibration professional is vital in creating a solution using techniques of measurement and analysis.

Certification in the HVAC Sound and Vibration Program is a statement that the supervisor or contractor has met ICB’s strictest standards in this rewarding field. S & V professionals are the eyes and ears on a construction project. As essential members of the environmental technology test team, they are in a position to take advantage of additional career and market opportunities.

Complete knowledge of HVAC systems is a prerequisite for sound and vibration work. For more information on qualifying to become a certified professional in the emerging HVAC Sound and Vibration market, contact us at:
